

GRANTS FROM THE FOUNDATION FOR APPLIED THERMODYNAMICS

The foundation, which was established 1993, herewith announces grants for the year of 2012. Applications must be in the written form and give the background of the applicant and her/his merits and for what purpose the grant will be used. The following excerpts from the statutes of the Foundation define what grants can be given.

2.2 The main purpose of the Foundation is to support scientific research on and development of thermodynamic databases and computer programs in order to serve the interest of human life, work and environment.

2.3 The Foundation will act for its main purpose by granting scholarships and other grants to individual researchers; mainly researchers or research students working with modelling, development or applications of thermodynamic calculations within the fields of materials, energy, physics or chemistry. Purposes, which benefit these fields within KTH, should be given priority.

2.4 Grants will especially be given for carrying out research projects, taking part in conferences and visits and for financing guest researchers. Only in exceptional cases will grants be given for the purchase of scientific equipment.

There are no special forms for the application but it can be formulated freely. The money shall be spent within a year from the date of decision and a written report shall be submitted to the Foundation.

Applications, which have reached the Foundation no later than January 31st, 2012, will be considered at a meeting in March. Applications for grants referring to the beginning of the year 2013 may be submitted at any time of the year 2012 and will be considered at a board meeting no later than November 2012. The decision will depend on how much funds are available at that time.

Applications must be submitted to
Stiftelsen för Tillämpad Termodynamik
c/o Associate Professor Malin Selleby
Dep Materials Science and Engineering
KTH
